Unlike the "step" and "direction" controller that you're familiar with, this one does microstepping to keep the sled from jerking from step to step, although the controller does have some non-linear deadzone region around the VC voltage. Currently, some of the best high-yield savings accounts have APYs that are just as good as or better than the yield from a one-year CD. 5) Built in thermal-shut-down circuit. eAAc Low ON-Resistor.
